arinkarabulut.com · github.com/Arink1

SUMMARY

Full-stack developer with two years of shipping production web applications that real businesses run on. Built and operate a multi-tenant sales SaaS (Next.js, Prisma, Twilio, Stripe) with three interlinked apps, a three-site game network with a Stripe-to-RCON store, and lead-generation sites for legal and insurance clients on Next.js, Supabase, and Python serverless functions. Own the full lifecycle from architecture and UI through deployment on Vercel and AWS and ongoing maintenance. Former licensed insurance broker who wrote roughly $500K in premiums, so I build software with the sales and compliance side (HIPAA, CMS, TCPA) in mind.

TECHNICAL SKILLS

Frontend: React 19, Next.js 15/16 (App Router, server components, server actions), TypeScript, Tailwind CSS 4, Vite, responsive and conversion-focused UI, SEO (metadata, sitemaps, Open Graph)

Backend: Node.js, Python, Django REST Framework, PostgreSQL, Prisma, Supabase (Postgres, Row Level Security, Auth), REST API design, webhooks, cron jobs, serverless functions

Integrations: Stripe (Checkout, subscriptions, metered billing, webhooks), Twilio Voice SDK and SMS, Resend, Mapbox and Deck.gl, Chrome extensions

AI: Claude API and OpenAI API integration, local LLMs with Ollama, prompt design, scheduled content generation

DevOps: Vercel, Docker, AWS Elastic Beanstalk and RDS, Git and GitHub, CI/CD, DNS and domains, monorepos (pnpm, Turborepo)

CMS and commerce: WordPress, PHP, MySQL, Shopify and Liquid

SELECTED PROJECTS (all live, source on GitHub unless noted)

OnlyDialer, multi-tenant sales SaaS (dialer, CRM, SMS) — Next.js, TypeScript, Prisma, PostgreSQL, Twilio, Stripe

onlydialer.com · crm.onlydialer.com · sms.onlydialer.com · three separate Vercel apps on one schema, linked over internal APIs · private source

- Designed the multi-tenant architecture: org-scoped data, per-organization Twilio sub-accounts and numbers, plan-based feature gating, white-label tier.
- Built the power dialer on the Twilio Voice SDK with local presence, cascade routing, recording, and 2FA login; the CRM with round-robin lead routing, TCPA consent tracking, and encrypted PII; the SMS app with a two-way inbox, drips, and opt-out handling.
- Wired the apps together with authenticated webhooks (new-lead auto-enroll, shared number provisioning, balance API) and Stripe per-seat plus metered billing.

HG Network, three game-server sites from one codebase — Next.js 16, React 19, Tailwind 4, Stripe, Supabase, RCON

hgcrafting.vercel.app · hgrusty.vercel.app · github.com/Arink1/hg-network

- One repo builds three Vercel projects switched by an environment variable; shared components with per-site theming, markdown news and rules, and generated sitemaps and Open Graph images.
- Store pipeline: Stripe Checkout, webhook to Supabase, command queue, and a poller on the game host that delivers purchases in-game over RCON and acknowledges them. Live player counts from mcstatus.io and BattleMetrics.

LegalHelp911, legal lead-generation site — Next.js 15, Tailwind 4, Python serverless, Supabase, Claude API

legalhelp911.com · github.com/Arink1/legalhelp911

- Mixed-runtime Vercel deploy: Next.js pages plus a Python intake function that validates leads, drops honeypot traffic, and stores TCPA consent per lead.
- Supabase Postgres locked down with RLS and service-role-only access; weekly cron drafts SEO articles with the Claude API for review before publishing.

Arin Health Agent and Bryan Health Agent, insurance sites — Next.js, React 19, Supabase, Resend, Vercel

arinhealthagent.com · bryanhealthagent.com · live with organic search traffic · github.com/Arink1/arinhealthagent-site

- Conversion-focused landing pages with consultation forms, Resend notifications, a TOTP-protected admin, subsidy estimator and doctor-lookup tools, and Claude-drafted news for SEO.
- First version shipped as a Django REST backend and Next.js frontend on AWS Elastic Beanstalk with RDS; rebuilt on Next.js and Vercel.

Other work — github.com/Arink1

- **Brand Forge:** Next.js 16 brand-identity generator on a local Ollama model or the Claude API, with PDF export. **Intelligence App:** React and Deck.gl geospatial dashboard rendering 100k+ points over Mapbox.
- **Django REST API on AWS:** custom user auth, Dockerized, deployed to Elastic Beanstalk with RDS. **Marijuana Land:** dispensary site on WordPress, rebuilt in Next.js (marijuanaland.com). Plus WordPress and Shopify client sites.

EXPERIENCE

Full-Stack Web Developer, Independent — Aug 2024 to present

- Design, build, deploy, and maintain the products and client sites above. Own hosting, DNS, analytics, billing integrations, client communication, and support.

Licensed Insurance Broker, First Family Insurance, Sunrise, FL — Oct 2024 to Jan 2026

- Wrote roughly $500K in first-year premiums across about 600 policies by phone, email, and video under a Florida 2-15 license in a HIPAA and CMS regulated environment.
- Built and shipped arinhealthagent.com during this role so the quoting and lead-intake tools matched how the team actually sold.

Operations Assistant and Web Developer, MGI Farms, Michigan — Aug 2024 to Nov 2024

Customer Service Representative, Teleperformance (remote) — Mar 2023 to Jan 2024

EDUCATION AND LICENSES

Associate degree, Broward College, Coconut Creek, FL, 2021 to 2023, plus coursework toward a bachelor's in cybersecurity · Florida 2-15 Health, Life, and Variable Annuity license
